

Home screen

1. Open the Insight app and make sure the correct machine is selected.

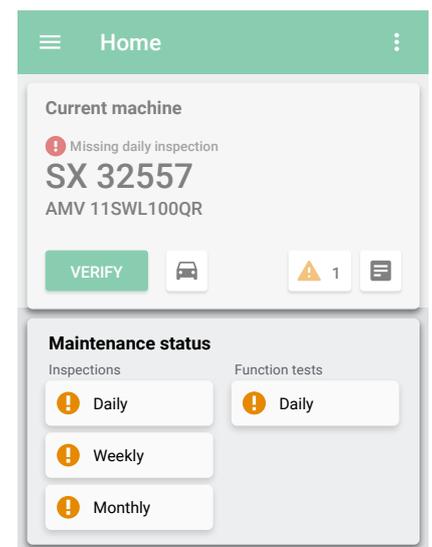

Select or change machine

2. Alternatively, press the “Select Machine” button to select or change machines.

Select the relevant machine from the list, or manually search for the machine if it is not found via Bluetooth.

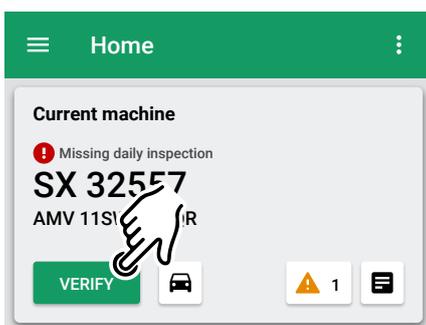

Maintenance status panel

In the maintenance status panel (widget), you can view the status of scheduled maintenance

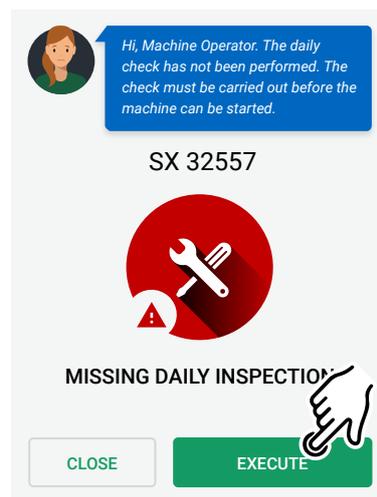

- Green indicates that maintenance has been completed.
- Orange indicates that maintenance is pending execution.
- Red indicates that maintenance has not been performed by the specified date.

Verify yourself

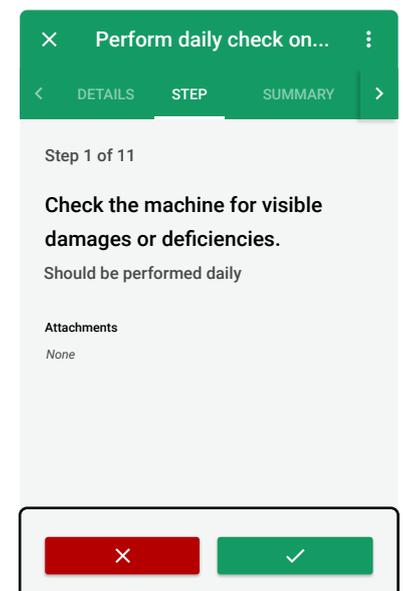

Press the “VERIFY” button to initiate scheduled maintenance. The system will first check if you are near the selected machine, and if the system cannot establish contact, the maintenance cannot be started.

Feedback

If there is pending maintenance on the machine, you will receive a notification. Press the “EXECUTE” button to initiate the maintenance task that must be completed before the machine can be used.

Perform the maintenance assignment

If there is an issue with the step, press the RED button. Then, report the issue. If everything is in order, press the GREEN button.
